A HIDDEN M^c.

By Jack Brandt

illustration below is recorded as 'MPC', with the vertical The of the P sharing with the M, but is it an McC with the small 'c' reversed? Looking at it more closely one the loop holes of the 'P' are quite a distance from the that vertical line so now I think, it is an 'McC'. The stamp is a an illegible cancel. This is 1d lilac, with listed in not either GB catalogue in either form. However both do list McC types, and no MPC's. So, which is it, who used it, and why was the 'c' reversed? If it was.
